EVOKO LISO

Demo server info

In order to demo Evoko Liso we have set up a demo server that you can connect your Evoko Liso to. For a demo you will need to have an Evoko Liso unit, internet connection (WiFi or Ethernet cable) with access to external networks, Power Supply or PoE.

If it is the first time you are using your Evoko Liso, you need to start by doing a firmware upgrade of the unit using a USB memory. Please download the latest firmware image from our downloads page and follow the instructions in our System Admin Guide, section 7.

Once you have upgraded the unit to the latest firmware version, connect it to a network and power it up.

Once the unit has booted up and you have a network connection, select SERVER as the installation method.

The Evoko Home IP address and port is: **52.169.219.160:3001**

You will then be asked to select your room. We have created several different rooms in different time zones and with different languages. On the next page you can see a summary of all rooms.

You are then ready to use your Evoko Liso and show how to make bookings, edit meetings, use the Room Finder, report broken equipment and all of the other great things you can do.

Note that since you will be sharing these rooms someone else might use it at the same time.

PIN is enabled for making bookings and reporting broken equipment, but turned off for all other features. The PIN has admin rights so it can also be used to log in to the Admin section to e.g. change rooms or setup a new WiFi network.

The PIN code is: **4065**

We hope that you will enjoy getting to know Evoko Liso – the next generation room manger!
